

The Water-Soluble Wax product is an aqueous wax emulsion used for selective decoration. Its purpose is to isolate the ceramic surface which will not be glazed. The wax disappears after firing and without leaving a residue.

Application methods:

Apply with a brush, a squeeze bottle, a sponge, etc. Start by dipping the brush in water, letting any excess water drip off. Once wet, the brush is loaded with water-soluble wax:

- Apply on the bisque or the leather-hardened clay body you wish to preserve. The wax will disappear after firing, leaving the bisque clean. This can be used for decoration using the "Cuerda Seca" technique, our Water-Soluble Wax product will act as a barrier between the "Cuerda Seca" glazes, and after firing, the design will remain clean and sharp on the bisque.
- Apply on top of a decoration created by layering two or more colour applications, glaze, or well-dried slip. Always wait for each layer of the Water-Soluble Wax to dry and remove any excess colour, glaze, or slip that may remain on the wax with a damp sponge.

The tools must first be cleaned with warm soapy water, rinsed under clean water, and then dried on absorbent kitchen paper. Your tools will last longer this way.

Advice:

We recommend wearing gloves and avoiding contact with the eyes, nose and mouth. Fire the piece in a well-ventilated area. Store tightly sealed, away from moisture or excessive heat.

Do not hesitate to contact our Technical Department for any questions or clarifications.
