

The collection consists of 23 Decorative Colours formulated without Lead in its composition.

It is available as a ready-to-use suspension or in powder form. It can be applied on white clay body bisque pieces or over glaze. Its firing temperature varies, from 980°C and in most cases, up to 1280°C.

### APPLICATION:

The manufacturing process and the different additives that make up these colours mean that they have the right consistency to be applied with a brush on ceramic bisque surfaces, dust- and grease stain-free, as this prevents their correct application, creating possible defects during firing that would spoil the finish.

For the application of the suspension series, it is recommended to extract a portion of the colour paste and dilute it with water in order to be able to apply it on a white clay body bisque piece. In this case, using either the clear glaze ETSP-01 Shiny or the matte glaze EMSP-00 is recommended.

If wanting to decorate on top of the shiny white glaze, using the glazes EOSP-01 and ESOP-00 is recommended.

Due to its composition, the Decorative Colours can be used to decorate both majolica and porcelain at the third firing. The firing temperature in this case is 980°C.

For the application of the provided product series in powder form, add water until achieving the required consistency for applying with a brush. If required, we have appropriate mediums for improving the brush strokes, such as SEROIL CS 71, or, for screen printing application, either SEROIL CS 71 or SEROGRAF.

*If needed, do not hesitate to contact our Technical Department for any queries or clarifications.*
